DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-6, none of the prior art of record discloses or makes obvious a method of managing image recording mediums, namely the step of selecting an image recorder for a particular subject/patient based on the predetermined subject information. Conventional patient identification/imaging systems (see below) are generally concerned with matching patient information to the generated images, but do not disclose selecting a type of imager/phosphor to match the patient information.

Regarding claims 7-19, none of the prior art of record specifies or makes obvious an apparatus for managing a image recording medium, namely the image recording medium selector for selecting the image recording medium that matches the predetermined subject information. Conventional patient identification/imaging systems (see below) are generally concerned with matching patient information to the generated images, but do not disclose selecting a type of imager/phosphor to match the patient information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. US Pre Grant Publication 2005/0227145 A1- this reference discloses an image output controlling method, where the size of the image is automatically controlled.
- b. US Pre Grant Publication 2005/0205813- this reference discloses a commonly assigned and similar invention.
- c. US Patent 5,865,745 A- this reference discloses a conventional device where the storage phosphors/imagers are automatically loaded (column 4, lines 9-19) and not selected to match a patient's identification information.
- d. US Patent 6,431,440 B1- this reference discloses a conventional patient ID/imaging unit, where the patient's information is matched up with the images already taken.
- e. US Patent 5,418,355 A- this reference discloses a conventional storage phosphor with a barcode affixed to the phosphor to match the image to the patient.
- f. US Patent 6,556,698 B1- this reference disclose a method and system for matching the phosphor to the patient.
- g. US Patent 5,130,739 A- this reference discloses a method of automatically optimizing exposure of an image, but does not disclose selecting a phosphor based on the patient's information.
